

## 实验十四.txt

### 实验十四 Servlet+Spring的应用

SpringBSDemo

加入Spring2Core

加入Spring2Web

加入MySQL

步一，创建DBBean

```
public class DBBean {  
  
    private String driver;  
    private String url;  
    private String user;  
    private String password;  
  
    public DBBean() {  
    }  
  
    public String getDriver() {  
        return driver;  
    }  
  
    public void setDriver(String driver) {
```

#### 实验十四.txt

```
        this.driver = driver;
    }

    public String getUrl() {
        return url;
    }

    public void setUrl(String url) {
        this.url = url;
    }

    public String getUser() {
        return user;
    }

    public void setUser(String user) {
        this.user = user;
    }

    public String getPassword() {
        return password;
    }

    public void setPassword(String password) {
        this.password = password;
    }
}
```

#### 步二，创建JdbcTemplate

```
public class JdbcTemplate {

    public static Connection getConnection(String driver,
String url,
                                String user, String password) {
        Connection conn = null;
        try {
            Class.forName(driver);
```

#### 实验十四.txt

```
        conn =
DriverManager.getConnection(url, user, password);
    } catch (Exception e) {
        e.printStackTrace();
    }
    return conn;
}

public static void close(Connection conn) {
    if (conn != null) {
        try {
            conn.close();
        } catch (SQLException e) {
            e.printStackTrace();
        }
    }
}

public static void close(PreparedStatement pstmt) {
    if (pstmt != null) {
        try {
            pstmt.close();
        } catch (SQLException e) {
            e.printStackTrace();
        }
    }
}

public static void close(ResultSet rs) {
    if (rs != null) {
        try {
            rs.close();
        } catch (SQLException e) {
            e.printStackTrace();
        }
    }
}
```

## 实验十四.txt

```
}
```

步三，修改spring-config.xml文件

```
<?xml version="1.0" encoding="UTF-8"?>
```

```
<beans
```

```
xmlns="http://www.springframework.org/schema/beans"
```

```
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
```

```
xsi:schemaLocation="http://www.springframework.org/schema/beans
```

```
http://www.springframework.org/schema/beans/spring-beans-2.0.xsd">
```

```
    <!-- 注册DBBean -->
```

```
    <bean id="db" class="tarena.DBBean">
```

```
        <property name="driver">
```

```
            <value>com.mysql.jdbc.Driver</value>
```

```
        </property>
```

```
        <property name="url">
```

```
            <value>jdbc:mysql://localhost:3306/test</value>
```

```
        </property>
```

```
        <property name="user">
```

```
            <value>root</value>
```

```
        </property>
```

```
        <property name="password">
```

```
            <value>admin</value>
```

```
        </property>
```

```
    </bean>
```

```
</beans>
```

步四，修改web.xml文件(重点)

```
<?xml version="1.0" encoding="UTF-8"?>
```

```
<web-app version="2.5"
```

#### 实验十四.txt

xmlns="http://java.sun.com/xml/ns/javaee"

xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"

xsi:schemaLocation="http://java.sun.com/xml/ns/javaee

http://java.sun.com/xml/ns/javaee/web-app\_2\_5.xsd">

<!-- 加载spring-config.xml文件 -->

<context-param>

<param-name>contextConfigLocation</param-name>

<param-value>

/WEB-INF/classes/tarena/spring-config.xml

</param-value>

</context-param>

<!-- spring提供的Servlet

<servlet>

<servlet-name>context</servlet-name>

<servlet-class>

org.springframework.web.context.ContextLoaderServlet

</servlet-class>

<load-on-startup>1</load-on-startup>

</servlet>

-->

<!-- spring提供的Listener -->

<listener>

<listener-class>

org.springframework.web.context.ContextLoaderListener

#### 实验十四.txt

```
</listener-class>
</listener>
```

```
<servlet>
    <servlet-name>DBServlet</servlet-name>
<servlet-class>tarena.DBServlet</servlet-class>
    <load-on-startup>1</load-on-startup>
</servlet>

<servlet-mapping>
    <servlet-name>DBServlet</servlet-name>
    <url-pattern>/db</url-pattern>
</servlet-mapping>
</web-app>
```

#### 步五，创建DBServlet

```
public class DBServlet extends HttpServlet {

    private Connection conn;

    public void destroy() {
        super.destroy();
        JdbcTemplate.close(conn);
    }

    public void doGet(HttpServletRequest request,
        HttpServletResponse response)
        throws ServletException,
        IOException {

        System.out.println(conn!=null);

    }

    public void init(ServletConfig config) throws
```

## 实验十四.txt

```
ServletException {  
  
        //ApplicationContext context =  
        //        new  
ClassPathXmlApplicationContext(  
        //  
"tarena/spring-config.xml");  
  
        WebApplicationContext wac =  
  
WebApplicationContextUtils.getWebApplicationContext(config.ge  
tServletContext());  
  
        DBBean db = (DBBean)wac.getBean("db");  
  
        String driver = db.getDriver();  
        String url = db.getUrl();  
        String user = db.getUser();  
        String password = db.getPassword();  
  
        conn =  
  
JdbcTemplate.getConnection(driver, url, user, password);  
  
        }  
  
}
```

步六，结果  
true（创建数据库连接）

实验十四.txt
